

## ADDENDUM

The following updates page 22 of the report to include the most up-to-date smog data available.

### PRELIMINARY 2003 OZONE DATA

This report also includes preliminary data from 21 states and the District of Columbia for 2003, which has been a relatively mild and wet summer. With fewer hot and sunny days, ozone levels appear to have declined in many areas but still are unacceptably high and will rise again as soon as the heat returns, unless we successfully reduce emission levels.

As of mid-August, 20 of the 21 states and the District of Columbia exceeded the national health standard for ozone 1,231 times compared with a total of 3,961 times in those states during the entire 2002 ozone season, making for a less smoggy season overall. Exceedances are substantially lower in New Hampshire, South Carolina, and Illinois in particular. On the other hand, Colorado is having its worst smog season in recent years, and Florida and Louisiana already have exceeded the national health standard for ozone more frequently than in all of 2002. Table 11 details the preliminary data for 2003.

**Table 11. Preliminary 2003 Ozone Data from 21 States and the District of Columbia**

State	Preliminary No. of 8-Hr Exceedances, 2003	2003 Data as of	No. of 8-Hr Exceedances, 2002	No. of 8-Hr Exceedances, 2001
Texas	329	8/25/03	397	310
Pennsylvania	154	8/16/03	594	393
New York	103	8/16/03	290	144
North Carolina	94	8/16/03	602	182
New Jersey	72	8/16/03	291	190
Virginia	67	8/16/03	264	149
Connecticut	59	8/24/03	179	105
Louisiana	56	8/18/03	10	41
Maryland	55	8/16/03	275	214
Colorado	35	8/25/03	8	3
Massachusetts	33	8/24/03	122	125
Florida	32	8/25/03	3	60
Georgia	29	8/19/03	166	64
Illinois	24	8/21/03	217	40
Delaware	21	8/16/03	74	53
West Virginia	19	8/16/03	80	24
